Company: Botium Toys (Case Study)

Executive Summary

This internal security audit was conducted using the NIST Cybersecurity Framework (CSF). The purpose was to evaluate existing IT controls, identify security risks, and assess compliance posture as the company expands globally.

Audit Scope

The audit focused on:

- IT infrastructure
- Payment processing systems
- Customer data handling
- Compliance with international regulations (EU operations)

Risks Identified

Risk	Impact	Recommendation
Weak access controls	High	Implement Multi-Factor Authentication
Lack of formal compliance documentation	High	Develop compliance policy
Data protection gaps	Medium	Encrypt sensitive data

Controls Review

- Access control reviewed
- Data protection controls reviewed
- Compliance practices evaluated

Recommendations

- Implement MFA
- Create incident response plan
- Improve compliance documentation
- Conduct regular audits
